Background & Methodology.

Background & Setting the Scene.

There is an increasing need in Australia's Horticulture Industry to monitor and gauge consumer perception and behaviour in relation to fresh vegetables.

Colmar Brunton has been commissioned to conduct a monthly on-line tracking project following specified vegetables across a three year period; monthly trend analysis; and additional ad-hoc projects to assist in this understanding of consumers.

The following report is designed to supplement an online Interactive Research Tool (IRT) and details the findings of the monthly on-line tracking program and trends analysis components.

This wave's report (Wave 5, October 2013) focuses on:

- ⇒ Beans
- ⇒ Carrots
- ⇒ Cauliflowers
- ⇒ Pumpkins

Online Methodology.

- Respondents were recruited via an Online Panel. If the respondents met the recruitment requirements of sufficient vegetable consumption (monthly) they were asked to complete the online questionnaire.
- All respondents completed general demographic and consumption questions. If respondents purchased any of the specific commodities within the last month they would complete those questions. A minimum of N=500 respondents completed the questionnaire.
- Topics covered in the questionnaire were vegetable purchase and consumption, category health, price and value perceptions, triggers and barriers to purchase and preparation and cooking preferences.
- An additional 2 ad-hoc questions are asked at the end of the questionnaire. The subjects of these questions are supplied by Horticulture Australia prior to each month to get feedback on topics of interest at that time.
- The questionnaire took 15 minutes to complete.
- Questions asked appear on the bottom of each page of this report. Unless stated otherwise, all scales were 0 -10 scales, with higher scores indicating greater agreement/liking/importance etc.

Sample.

In total, 589 respondents completed the questionnaire. Respondents represented all States and Territories, as well as both metro and rural areas.

Demographic information about age and household structure was also collected to examine differences between life stages.

To qualify for the questionnaire, respondents...

- ⇒ Were aged 18 years and over
- ⇒ Purchased fresh vegetables at least once a month
- ⇒ Purchased at least one of the monthly commodities (Bean, Carrot, Cauliflower or Pumpkin) within the last month
- ⇒ Were the main or joint grocery buyer

Trends Research: Our Approach

- ▶ Colmar Brunton has used a combination of both desk research and in the field market research to explore the trends of each vegetable commodity being tracked this month.
- ▶ Our main source of secondary data for this report was collected from Mintel Global New Products Database (GNPD).
- ▶ This data source is used to analyse products launched around the globe in the last 3 months (L3M) that contained each vegetable being tracked as a core ingredient.
- ▶ Trends are determined at a global and regional level.
- ▶ Claims and pack types used for the launched products are explored and the relevant product categories are determined. Specific examples of products being launched around the globe that are particularly innovative are displayed for reference.
- ▶ Trend reports are provided monthly and will reflect the 4 commodities tracked in the preceding period.

Product Launches Last 3 Months (L3M)

How to Read Summaries

See below for the format that will be used to summarise the trend data collected for each commodity.

Wave 5: Executive Summary

Beans Grower Action Plan

21%

Price as
Barrier

The main barriers to purchase were price and lack of knowledge of versatility.

1.

Insight:

Key barrier to purchase was price.

Recommendation:

Promote nutrition content and health benefits to ensure a value for money proposition is clear to consumers.

2.

Insight:

10% of consumers indicated that beans were not versatile, and this was a barrier to purchase.

Recommendation:

Provide recipe suggestions and visual cues at point of sale to inform consumers of varied methods to use.

3.

Insight:

Only a quarter of consumers use beans for quick meals.

Recommendation:

Consider promoting pre-prepared, ready to cook beans, highlighting cooking time to promote more regular use of beans.

Carrot Grower Action Plan

>30%

Indicated...

The main barrier to purchase was belief by consumers they purchase and consume enough carrots.

1.

Insight:

Consumers felt that they already consumed enough carrots.

Recommendation:

This is likely due to carrot being used in a routine, non-diverse manner. Consider re-invigorating the carrot category by introducing new varieties and highlighting alternate interesting uses for carrots.

2.

Insight:

Increased future purchase intent was relatively low.

Recommendation:

Carrots are largely used in Australian cuisine. Consider promoting carrots in alternate cuisines, and specific mixed packs e.g. Stir-fry ready mixed vegetable formats.

3.

Insight:

Carrot type awareness was primarily driven by colour and size.

Recommendation:

Point of sale material should match recent trends seen in the potato industry, whereby different varieties and types are associated with different cooking styles.

Cauliflower Grower Action Plan

70%

Of consumers could not recall a variety/type of cauliflower.

1.

Insight:

Compared to Wave 1, significantly more consumers were purchasing cauliflower at specialist retailers.

Recommendation:

Growers should consider working more closely with specialist retailers to educate them on different varieties, who in turn can educate the consumers.

2.

Insight:

There is a desire amongst consumers for the ability to purchase smaller portion sizes.

Recommendation:

Consider selling cauliflower in smaller floret format, as well as whole or half portions.

3.

Insight:

Global trends are showing an increase in the use of cauliflower in processed foods.

Recommendation:

Consider promoting cauliflower to processed food manufacturers more heavily. Suggest variety/type of cauliflower is called out clearly on pack.

Pumpkin Grower Action Plan

58%

Of consumers use pumpkin to add variety to their vegetable selection.

1.

Insight:

Pumpkin had one of the highest levels of reported wastage.

Recommendation:

Educate consumers on the versatility of using more of their pumpkin (i.e. Seeds) to decrease wastage and further increase variety to meals.

2.

Insight:

Being inconvenient to peel and prepare was a key barrier to purchase.

Recommendation:

Further promote pre-prepared, ready to cook pumpkin and investigate potential frozen offerings, highlighting the convenience this may offer.

3.

Insight:

Shelf life of vegetables is of high importance to consumers. Of all vegetables, pumpkin has the longest expected shelf life.

Recommendation:

Promote the long shelf life of fresh pumpkin to highlight value and convenience.

Wave 5: Fact Base

(1 of 2)

14

Pumpkin:

- Key comparisons with Wave 1 were an increase in the average price per kg and significant increase in Queensland Blue awareness. Consumers were more likely to state triggers to future purchase as being buying what they need and wanting variety in their diets.
- Pumpkins had high levels of importance, satisfaction, endorsement and interest in new types; pumpkins scored higher than the Harvest mean on all category health measures.
- Pumpkins were purchased on average 3.1 times a month and consumed 9.1 times.
- Pumpkins were perceived to be fairly good value for money. Consumers typically purchased 1.5kg in one shop, in the format of half pumpkins. The last recalled spend was \$3.30.
- Price tracking showed that prices varied little by state or retailer, and the average price was \$3.72/kg.
- Butternut and Jap pumpkins were the varieties with the highest spontaneous awareness. Only one in five respondents could not name any varieties of pumpkin.
- Pumpkins were expected to stay fresh for 13 days, and 80% of respondents found that this expectation was met most or all of the time.

Carrot:

- Compared with Wave 1, consumers were significantly more likely to purchase from a specialist retailer. The recalled last spend was reduced by \$1.00. Consumers were significantly more likely to cook carrots in traditional Australian cuisine. Provenance was significantly more important to consumers.
- Carrots did not score highly on importance and were on par with Harvest mean for most category health measures; however, the vast majority expect to buy the same amount in future.
- Carrots were purchased on average 3.9 times a month and consumed 14.5 times a month.
- Carrots were perceived to be very good value for money. Typical purchase amount was 1.2kg of carrots, in a small bag. The last recalled spend was \$2.40.
- Price tracking showed little variation in carrot price. The average price was \$1.96/kg.
- Six in ten respondents did not know any varieties of carrot. Respondents described carrots by their colour or size.
- Respondents expected carrots to stay fresh for 12 days, and the majority (88%) found that this expectation was met most or all of the time.

Cauliflower:

- Compared with Wave 1, consumption of cauliflower had significantly increased and was more likely used to compliment other food. There was a significant increase in purchased from specialist retailers. There was higher awareness for all cauliflower types, especially for white. Cauliflower was cooked significantly more in Chinese cuisine.
- Cauliflowers did not have high levels of importance or interest – they are below the Harvest category health means. However, 10% of respondents intend to buy more in future.
- Cauliflowers were purchased on average 3.2 times a month and consumed 8.5 times.
- Respondents thought that cauliflowers were good value for money. Consumers typically purchased 1kg at a time, in the format of whole cauliflower. The last recalled spend was \$2.90.
- Price tracking showed that cauliflowers were on special in Coles in NT, SA and QLD, which led to a large price range in this wave. The average price was \$3.18 each.
- 70% of respondents did not know any varieties of cauliflower – those who named varieties did so by colour.
- Cauliflowers were expected to stay fresh for 9 days, and 81% of respondents found that this was met most or all of the time.

French & Runner Beans:

- Key comparisons with Wave 1 indicate that there was a decrease in average weight of purchase and significant increase in the number of consumers indicating that beans are not versatile. **There was a significant increase in awareness of broad beans and increase in using beans in Australian and British cuisine.**
- Beans scored lower than the Harvest category health mean on satisfaction and endorsement. However, 12% of respondents intend to buy more in future.
- Beans were purchased on average 3.6 times a month and consumed 8.3 times a month.
- Beans were typically purchased individually and the last purchase amount was 600g. Last recalled spend was \$3.30 and value for money was rated quite well.
- Price tracking showed a large range in price across states and by store. The average price was \$6.94/kg.
- Just over half of respondents did not know any varieties of bean. Fewer respondents were able to name varieties than in Wave 1.
- Respondents expected beans to stay fresh for 8 days, and the majority (70%) found that this expectation was met most or all of the time.

Wave 5: Ad-Hoc Questions

Additional Monthly Questions Asked: Vegetable Wastage

Over a third of respondents believed they could not reduce their wastage.

Average
Vegetable
Wastage
6%

- Overall, vegetable wastage was relatively minimal.
- Over a third of respondents identified that increased freshness and shelf-life would decrease their vegetable wastage.
- Respondents also wanted smaller portion sizes available to purchase and greater information on using the whole vegetable.

Wave 5: Overall Vegetable Tracking

Vegetables Purchased Last Month

- Overall, there were less vegetables purchased compared with Wave 4. This was particularly noticeable for sweet potato, garlic, chillies and chives.
- Carrots, tomatoes, potatoes and cauliflowers were the most purchased vegetable commodities this month.

■ Wave 1: June ■ Wave 2: July ■ Wave 3: August 2013 ■ Wave 4: September 2013 ■ Wave 5: October 2013

Category Health

- ▶ Category health is a measure to provide an overview of consumer sentiment of the commodities tracked each month.
- ▶ Similarly to Wave 1, Carrot and Cauliflower have low importance and interest in new varieties compared with other commodities tracked (Harvest Total Mean). This suggests that these vegetables may have become uninspiring staple foods. They will require something new to reinvigorate the category and grow consumer interest (to increase purchase)
- ▶ Pumpkin displayed strong category health scores, indicating that consumers are satisfied with availability and freshness of produce. A high level of importance is placed on pumpkin, indicating consumer demand for the vegetable. Future purchase intent was low, which is likely due to seasonality of the vegetable.

	Beans	Carrot	Cauliflower	Pumpkin	Harvest Total Mean
Importance	6.2	5.7	5.0	6.7	6.2
Satisfaction	6.2	6.7	6.5	6.9	6.6
Endorsement	6.4	6.6	6.4	6.9	6.8
Interest (New Varieties)	6.1	5.8	5.5	6.3	6.1
Future Purchase					
More	12%	9%	10%	11%	13%
Same	86%	91%	89%	87%	86%
Less	2%	1%	1%	2%	2%

CH1. How important to you is having a range of <commodity> available in the store where you usually shop?

CH2. How satisfied or dissatisfied are you with the range of <commodity> currently available?

CH3. How likely would you be to recommend <commodity> to your family and friends?

CH4. How interested or disinterested are you in new <commodity> varieties?

CH5. In the future, are you likely to buy?

Harvest Total Mean is the meal of all commodities from Wave 1, up to and including current wave. N=589

Beans.

Purchase and Consumption Behaviour

22

French & Runner Beans

Average
Purchase
3.6 times per
month

Average
Consumption
8.3 times per
month

⇒ Compared with Wave 1, purchase of beans from specialist retailers has significantly increased (up 8%).

⇒ The most popular retail channels for purchase remain Woolworths and Coles.

⇒ On average, French and runner beans were purchased almost once a week, and consumed twice a week.

Purchase Channels

Q1. On average, how often do you purchase French and runner beans?
Q2. On average, how often do you consume French and runner beans?
Q5. From which of the following channels do you typically purchase French and runner beans?
Sample Wave 1 N=506, Wave 5 N=346
* Indicates significantly higher scores between Waves

⇒ Average Spend & Price Sensitivity

French & Runner Beans

⇒ The average consumer typically purchases **600g** of Beans, which is 300g less compared with Wave 1.

⇒ The average recalled last spend on Beans was **\$3.30**

⇒ Consumers perceived the average price for Beans as good value for money **(6.2/10)**.

⇒ Pack Formats Purchased

French & Runner Beans

- ⇒ The proportion of respondents who purchase beans in each format has remained in line with Wave 1.
- ⇒ On average the number of individual beans purchased slightly increased.

➡➡➡ Online and In-store Commodity Prices

Beans (Green)

25

Spontaneous Awareness & Purchase

French and Runner Beans

- ▶ Compared with Wave 1, awareness of broad beans was significantly higher, up 7%.
- ▶ Overall awareness and recall of bean types was low, remaining consistent with Wave 1.

Q6a. What varieties/types of French and runner beans are you aware of? (unprompted)
Wave 1 N=506, Wave 5 N=346

* Indicates significantly higher scores between Waves

Triggers & Barriers to Purchase

French and Runner Beans

27

Triggers

Compared to wave 1, convenience factors had increased as triggers to purchase, while health reasons were slightly less important.

There was a significant increase in consumers indicating that beans were not versatile compared with Wave 1.

Price was a main barrier to purchasing beans. Other mentions included already buying enough as required and liking to have a variety of vegetables.

Barriers

Wave 5: October 2013 Wave 1: June 2013

Wave 5: October 2013 Wave 1: June 2013

Q7. Which of the following reasons best describes why you purchase French and runner beans?

Q8. Which reason best describes why you don't buy French and runner beans more often?

Wave 1 N=506, Wave 5 N=346

* Indicates significantly higher scores between Waves

Cooking Preferences & Occasions: French & Runner Beans

- ⇒ The current wave showed a significant increase in cooking Traditional Australian and British cuisine compared with Wave 1.
- ⇒ Consumption occasions remained consistent across waves, with weekday dinners being the top occasion.
- ⇒ Beans were increasingly served with potatoes and cauliflowers compared with Wave 1.

Importance of Provenance

French & Runner Beans

29

⇒ Although not significantly different to Wave 1, trends indicate that provenance may be increasing in importance.

Freshness and Longevity: French & Runner Beans

Expected
To stay
fresh for
8 days

- ⇒ Expectations of freshness are on par with Wave 1. Overall, expectations were met at least most of the time for 70% of respondents.
- ⇒ Respondents expected beans to stay fresh for 8 days, which has slightly increased since Wave 1.

Expectations Met

French and Runner Beans Trends

*Green Bean was the search term for Mintel

Bean Global NPDs

August–October 2013

There were 235 new products launched over the last 3 months that contained French and runner beans as an ingredient. The majority of launches occurred in the Asia Pacific region. Top category launches were bakery, meals and snacks.

French & Runner Beans Product Launches: Last 3 Months (August–October 2013) Summary

- A total of 235 products containing French and runner beans as an ingredient were launched globally in the last 3 months, which is considerably higher compared with Wave 1 (133 launches).
- There were no green bean launches in Australia in the last 3 months compared with Wave 1 where there were 29 launches.
- Asia Pacific and North America were the top 2 regions where these products were launched (73% and 16% respectively). Vietnam and the USA were the top 2 countries for launches in the last 3 months (23% and 14% respectively).
- Flexible followed by tub packaging were the 2 top pack formats used for the products launched in the last 3 months (46% and 13% respectively).
- The top categories for product launches were bakery goods (31%), meals (17%) and snacks (11%).
- The core claims used for these launches globally were either health benefit based (e.g. no additives/preservatives 24%) and seasonal (23%).
- The most innovative launches found were: green bean energy cereal drink and green bean ice cream (examples of these products can be found at the end of the French and runner bean trend report).

Source: Mintel (2013)

French & Runner Bean Launches

Country, Region & Categories

- Vietnam and the USA were the top countries where products were launched. 34
- Bakery products were the top category of products launched for this period, which is significantly higher compared with Wave 1.

Top Launch Countries

Top Launch Categories

French & Runner Bean SKUs

Top Claims & Pack Formats Used

- ▶ The 'seasonal' claim used in Asia Pacific may indicate that it is peak season for this commodity and may account for the vast increase in bean launches in the last 3 months.
- ▶ Other top claims were no additives/preservatives and convenience claims.
- ▶ Globally the top pack formats used product launches was flexible packaging and tubs. This was consistent for all region launches.
