

AGRICHEMICAL PEST MANAGEMENT NEEDS & PRIORITIES WORKSHOP

AUSVEG Agrichemical pest management needs and priorities Project Coordinator, Patrick Arratia, is working with growers and stakeholders in the Australian vegetable industry to establish a prioritization process.

The prioritization process will help develop an understanding of the Australian vegetable industry's chemical needs, which will result in a greater ability to drive more crops onto on-label use rather than minor use permits.

The project's objective is to coordinate vegetable industry agrichemical pest needs by identifying and prioritising potential gaps through the implementation of an effective prioritisation process for the industry. The second workshop will cover LEEKS and CELERY growers from the Frankston, Clyde, Cranbourne and Mornington Peninsula region, and surroundings.

So, if you grow Leeks and Celery in the region, come along to the workshop to discuss and contribute to an effective pest and disease prioritization process and understand more about the project.

CROPS

Leek and Celery

REGION

Frankston, Clyde, Cranbourne and Mornington
Peninsula region and surroundings

DATE

28 September 2017

TIME

2pm – 4pm

ADDRESS

Schreurs & Sons 90 Twyford Road, Cyde

RSVP
