

Broccoli 'extrusion' demo

Creating value from vegetable waste

National Vegetable
Extension Network

VICTORIA - NORTHERN,
WESTERN & SOUTH EASTERN

Interested in how to turn vegetable waste into nutrient dense, value added products?

Register to watch an extrusion demonstration of broccoli and carrot by the CSIRO research team working on the Hort Innovation funded project, creating value from vegetable waste.

The live demonstration will allow participants to touch and taste the extrusion of powdered broccoli or carrots into crunchy snacks, and discuss opportunities for value added products within your business.

Extrusion is a versatile processing technology which offers the integration of a variety of processes, improved digestibility of proteins, reduced anti-nutrients, enhanced functionality and on-site processing options.

Details

Date: Tuesday, 24 October 2017

Time: 3.00pm - 4.00pm

Location: Fresh Select
610 Duncans Road
WERRIBEE SOUTH

RSVP: Clinton Muller
