

AGRICHEMICAL PEST MANAGEMENT NEEDS & PRIORITIES WORKSHOP

AUSVEG Agrichemical pest management needs and priorities Project Coordinator, Patrick Arratia, is working with growers and agronomists in the Australian vegetable industry to establish a pest prioritization process for the vegetable industry.

The project's objective is to coordinate vegetable industry agrichemical pest needs by prioritising and identifying potential gaps through the implementation of an effective prioritisation process for the vegetable industry. This working group event will cover SWEETPOTATO growers from the Atherton region and surroundings.

So, if you grow SWEETPOTATO in the region, come along to this working group event to discuss and contribute to an effective pest and disease prioritisation process.

CROP

SWEETPOTATO
