SIVANTO[®]

prime

- ▶ **Excellent crop protection**
- ▶ **Quick feeding cessation**
- ▶ **Effective virus vector control**
- ▶ **Bee safe and IPM compatible***
- ▶ **Short withholding periods**
- ▶ **Field and protected cropping**

SIVANTO[®] prime is a new insecticide from Bayer for the control of a range of sucking insect pests with an outstanding safety profile. SIVANTO prime controls important stages in the insect lifecycle and offers excellent crop protection. SIVANTO prime provides fast cessation of feeding and excellent control of insects that act as vectors for viruses and thereby helps to mitigate the effects of secondary transmission of viruses from insect feeding.

SIVANTO prime is compatible with honeybees and native stingless bees allowing application during flowering when used as directed. Demonstrated selectivity to many beneficial species in vegetable crops provides a perfect fit for Integrated Pest Management (IPM) programs.* In addition, the mode of action of the systemic active ingredient flupyradifurone in SIVANTO prime means it is highly suitable for use in resistance management programs, including against selected neonicotinoid-resistant pest populations (e.g. whiteflies and selected aphid species).

*SIVANTO prime may cause short-term effects to bees - refer to label statement. Where predatory bugs are not employed.

▶ PEST TARGETS

**SILVERLEAF
WHITEFLY**
(*Bemisia tabaci*
Biotype B)

**GREEN PEACH
APHID**
(*Myzus persicae*)

**GREENHOUSE
WHITEFLY**
(*Trialeurodes
vaporariorum*)

**COTTON
APHID**
(*Aphis gossypii*)

▶ CROP TARGETS

TOMATOES

CUCURBITS

PEPPERS

EGGPLANTS

POTATOES

GREEN BEANS

SWEET POTATOES

▶ GET IN TOUCH AND KEEP INFORMED

Bayer has conducted hundreds of trials with SIVANTO prime across a range of target crops all around the world.

In Australia, Bayer has completed more than 100 replicated efficacy, residue and compatibility trials.
