## Horticulture Industry

Farming and the fresh produce sector are not what they were 30 years ago. With global food demand forecast to increase 60% by 2060, the opportunity for young people to play a part in the world's food bowl is very real.

There are jobs available now, and with the drive for industry growth, there will be more jobs. The future is exciting, and we want to share that excitement with the next generation.

### Topics available

- Sustainability
- Business Management
- Farm Operations
- Vegetable Processing
- Supply Chain
- Plant Life Cycle
- Horticulture

The educational benefits of our VEG Schools program are diverse. Not only is it a fun and a hugely memorable time, but there are also constant opportunities for students to expand their own individual tacit knowledge crucial to higher level learning and problem-solving skills.

1. Improves critical thinking skills.
2. Experiential learning takes place.
3. Reinforces classroom material.
4. Students are encouraged to learn.

Great school excursions take planning and effort, but the rewards can be huge for both students and teachers and something students will remember for a long time. We take the stress out of the planning and put the entire session together for the school group and facilitate all activities. Teachers need only to focus on getting the students to and from our facility.

### Our Program

- 2 hour program
- Arrive 10am - Depart 12pm
- Safety Induction
- Plant Life Cycle
- Production Facility
- Farm and/or facility tour
- Living Classroom
- Quality Control
- Learning Activities
