

NSW vegetable growers and sweet corn field day

Post flooding to current season pest & disease management in practice.

Future proofing against weather events: How can monitoring & integrated pest and disease management (IPDM) assist your farm?

Hear from interstate and local researchers, advisers and growers on:

- What has local monitoring revealed and what management response should be considered in controlling Fall armyworm?
- What have we learnt about pest and disease impacts and control options after flooding and why is this knowledge valuable?
- IPDM planning in 2024- what to consider, including weather forecasts.
- Monitoring and diagnostics testing- what is it and how do you do it?

Take home a diagnostics kit to submit pest & disease samples to the NSW DPI laboratory for FREE!

When?

Friday 22 March, 9.30am- 12.30pm

Where?

Local Land Services
Demonstration Farm
40 Edwards Road,
Richmond Lowlands 2753

**Including an industry
Q&A panel, field
demonstrations &
discussion, and a social
lunch!**

**Hort
Innovation** VEGETABLE
FUND

This project has been funded by Hort Innovation using the vegetable research and development levy and funds from the Australian Government. For more information on the fund and strategic levy investment visit horticulture.com.au

The Building Biosecurity Capacity and Resilience within the NSW Vegetable Industry Project is funded by the Australian and NSW Government's Storm and Flood Industry Recovery Program with support from AUSVEG and Local Land Services. VegNET 3.0 (VG21000) and the National fall army worm innovation system for the Australian vegetable industry project (VG22006) are funded by Hort Innovation using the vegetable research and development levy and funds from the Australian Government. VG22006 is also supported by Queensland Department of Agriculture and Fisheries and the Victorian Department of Energy, Environment and Climate Action.
